PROFILE

B.Sc. graduate in Animation, VFX & Gaming specializing in Game Design and Development. Experienced across the full 3D production pipeline — organic sculpting, hard-surface modeling, PBR texturing, UV/baking, rigging, and environment art. Builds playable game prototypes in Unity (C#) and works with Unreal Engine Blueprints. Focused on creating assets and mechanics that are both visually strong and satisfying to interact with.

TECHNICAL SKILLS

Game Dev: Unity (C#) · Unreal Engine (Blueprints — player input, collision, triggers, game flow)

3D & Sculpting: ZBrush · Autodesk Maya · Blender · Hard-surface · Organic sculpting · Environment art

Texturing: Substance Painter · PBR workflow · UV unwrapping · Normal/AO baking

Rendering: Arnold (Maya) · Blender Cycles / Eevee · Cinematic lighting & composition

2D & Other: Adobe Photoshop · Visual storytelling · Prop & product modeling

GAME DEVELOPMENT

One More Try · Unity · C#

2D Precision Platformer · [Play on itch.io →](#)

- Single-player CRT-aesthetic 2D platformer built around tight, skill-based movement and deliberate level design.
- Custom Deception Engine dynamically alters level geometry mid-run to subvert player expectations and drive replayability.
- Implemented Temporal Dilation (slow-motion system), Coyote Time, and Input Buffering for controls that feel responsive yet retain a high skill ceiling.
- Designed all game systems, level layouts, and art direction end-to-end in Unity.

FOXY · Unity · C#

2D Game Mechanic Prototype · [Play on itch.io →](#)

- Prototype focused on responsive 2D character movement — physics interactions, tuned jump arcs, and smooth camera follow.
- Explored game feel fundamentals: player control, level block-out, and early combat logic.

Unreal Engine · Blueprint Prototypes

Game Logic & Interaction Systems

- Built Blueprint-driven prototypes covering player input handling, character movement, collision events, and trigger-based interactions.
- Implemented basic game flow systems including level transitions, win/lose conditions, and HUD updates using UE's visual scripting.

3D ART & SCULPTING

Character & Creature Sculpting

ZBrush · Substance Painter · Blender

- Attack Titan (Fan Art) — full character sculpt studying realistic human anatomy, muscle flow, and facial structure; textured in Substance Painter.
- Minotaur Creature Bust — stylized bust with exaggerated anatomy and strong silhouette; full UV, bake, and PBR texture pipeline.
- Cheetah Skull — anatomical study of bone structure, proportions, and tooth placement; sculpted and textured for realism.

Weapons, Props & Hard-Surface

ZBrush · Blender · Maya · Substance Painter · Arnold

- Fantasy Axe — game-ready stylized prop: sculpted in ZBrush, retopologized to low-poly, UV unwrapped, and PBR textured.
- Rengoku's Katana (Fan Art) — full Blender pipeline including modeling, shading, cinematic lighting, and particle FX rendering.
- Hard-surface prop studies: pistol composition, sci-fi ray gun, crossbow — covering modeling, shading, and Arnold/Cycles rendering.

Environment & Product Art

Maya · Arnold · Substance Painter · Blender

- Haunted House — stylized environment modeled entirely in Maya, textured in Substance Painter, lit and rendered with Arnold.
- Game-ready environment props: wooden barrel, treasure chest, well — full PBR pipeline with baked normals and roughness maps.
- Product visualization studies: Pepsi can, whisky glass, fruit bowl — focused on realistic shading, materials, and studio lighting.

EDUCATION

Bachelor of Science — Animation, VFX & Gaming

Specialization: Game Design and Development · Chandigarh University, Mohali, Punjab · 2023 – 2026
